

## **EE31**

# Multifunctional Industrial Transmitter for Humidity / Temperature / Dew Point / Absolute Humidity...

The precise and reliable measurement of humidity in industrial processes is gaining more and more importance. The multifunctional transmitters series EE31 offer the ideal solution.

The result of many years of experience in humidity measurement technology for industrial applications, the EE31 series builds on the E+E high-quality HC series capacitive humidity sensor elements.

The optimal hardware structure for varying applications is achieved by combining various standard mechanical and electronic modules. User friendly MS Windows software tools simplify the configuration of the transmitter, the data recording, visualization and processing.

The measured values are available on two freely configurable and scalable analogue outputs and on the serial RS232 interface. With an optional RS485 module up to 32 transmitters can be connected to a network and one single PC interface allowing easy remote monitoring.

Two freely configurable optional alarm outputs can be set by software. The measured data and the corresponding MIN/MAX values can be viewed on the optional LC display.

Other features especially tailored for harsh industrial applications are the new housing concept consisting of three modules, the easy on-site adjustment and calibration, and the pluggable sensor option.

These features allow for very fast and easy servicing of the transmitter.

By selecting a suitable housing version the EE31 series can be used for the entire range of humidity measurement applications:

- Model A for wall mounting
- Model B for duct mounting
- Model D with remote sensing probe for measurements in the extended temperature range -40...180°C (-40...356°F).
- Model E with remote sensing probe for pressure tight applications between 0.01...20 bar (0.15...300psi).

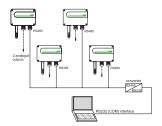

#### **Network with up to 32 transmitters**

Up to 32 transmitters can be connected in a RS-485 bus system to a single PC interface.

The measured and calculated data is stored in a PC database which is available for further processing.

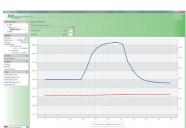

The data base can also be stored in ASCII format or in a database with ODBC interface.

#### Product Configuration Software (EE-PCS) \_

The Configuration Software is used for:

- flexible, easy and fast setup of the analogue and alarm outputs.
- adjustment of the humidity and temperature outputs.
- exchange of the sensing probe or of the sensors.

12

## Easy calibration and adjustment of the transmitter \_

The modular housing of the EE31 enables a fast and easy on-site adjustment and calibration. Using the optional extension cable one can adjust or calibrate the entire measurement loop without interrupting the measurement. No need for time-consuming dismounting and wiring of the instrument.

This feature makes the EE31 series suitable for use in regulatory environments (e.g. FDA, GAMP).

The adjustment of humidity and temperature (2 points or 1 point) is performed either with a simple routine using two push buttons on the printed circuit board or with the configuration software.

#### 2 Status LEDs \_

Two status LEDs on the printed circuit board indicate the transmitter status and eventual errors, especially useful during installation or service operations.

## Sensor Coating \_\_\_\_

Operation in heavily polluted and/or corrosive environments is typical for many industrial processes and can lead to drift or damage of the humidity sensor and thus to false measured values. The unique protective coating developed by E+E for the sensing probe brings a significant improvement on the long-term stability of the transmitter in very dirty and aggressive environments. (ordering code: HC01)

## Integrated Display \_\_\_\_\_

The actual measured and calculated values as well as the corresponding Min/Max values can be indicated on an optional display. The physical quantity to be displayed is chosen with the push buttons on the housing. (ordering code: D05)

## Pluggable sensing probe \_\_

The pluggable sensing probe with plug connection can be easily exchanged in the versions D and E. The installation of the probe cable (up to 20m / 65ft) is significantly simplified and can be installed prior to fitting the transmitter. (ordering code: P01)

#### Alarm outputs\_\_\_\_\_

An optional alarm module with 2 relay outputs is available for control and alarm purposes. The selection of the physical quantity for the relay outputs and the setting of threshold and hysteresis can be easily made with the configuration software included in the standard scope of supply.

## Integrated power supply \_

A power supply, integrated in the back module of the housing, can be ordered optionally (100...240V AC, 50/60Hz; ordering code V01). The power supply V01 is available for both polycarbonate and metal housing and comes standard with two plugs for supply and outputs to allow an easy connection.

## **Connection versions**

#### standard

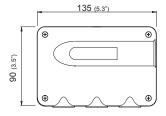

\* Siemens 6ES7 194-1KA01-0XA0

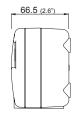

66.5 (2.6")

#### **Dimensions in mm**

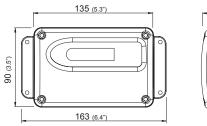

### Housing:

#### polycarbonate housing

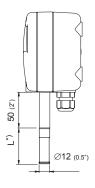

#### metal housing

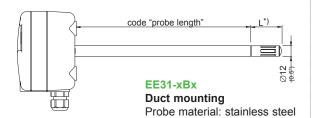

For use in harsh industrial environments all models of the EE31 are available in a robust metal housing.

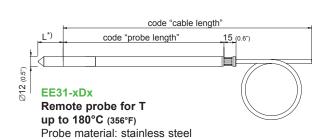

The very smooth surface and the rounded outlines allow for the use in clean rooms as well.

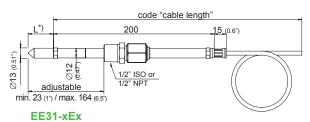

#### Models:

EE31-xAx
Wall mounting
Probe material: PC

Pressure tight probe up to 20bar (300psi)
Probe material: stainless steel

<sup>1)</sup> Refer to the working range of the humidity sensor.

<sup>2)</sup> Can be easily changed by software.

<sup>3)</sup> Refer to accuracies of calculated values (www.epluse.com/feuchtemessung).

\*) The accuracy statement includes the uncertainty of the factory calibration with an enhancement factor k=2 (2-times standard deviation).

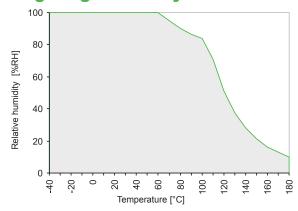

The accuracy was calculated in accordance with EA-4/02 and with regard to GUM (Guide to the Expression of Uncertainty in Measurement).

## **Technical Data for Options**

Display	graphical LC display (128x32 pixels), with integrated push-buttons for selecting parameters and MIN/MAX function
Alarm outputs	2 x 1 switch contact
	250V AC / 6A 28V DC / 6A
Threshold + hysteresis	can be adjusted with configuration software
Switching parameters	freely selectable between:
<b>.</b>	RH Relative humidity
	T Temperature
	Td Dew-point temperature
	Tf Frost-point temperature
	Tw Wet-bulb temperature
	e Water vapour partial pressure
	r Mixture ratio
	dv Absolute humidity
	h Specific enthalpy

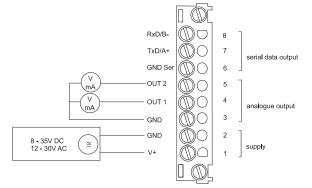

## Working range humidity sensor

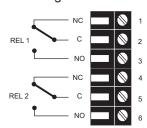

The grey area shows the allowed measurement range for the humidity sensor.

Operating points outside of this range do not lead to destruction of the element, but the specified measurement accuracy cannot be guaranteed.
